AMAN ARORA

Senior Software Developer - React / React Native / Javascript / AI Integration
+1 416-(268)-7369 | Toronto, Canada| Permanent Resident | amanarora0796@gmail.com | LinkedIn | GitHub | LeetCode

PROFESSIONAL SUMMARY

Senior Software Developer with 7+ years building and scaling production web and mobile applications (React, React Native, Vue.js, Next.js, Python, Node.js), with deep expertise in offline-first mobile architecture, asynchronous media pipelines, and computer-vision integration. Shipped systems supporting **25,000+ users across 17+ global clients**, including annotation workflows spanning **500K+ images** and batch image processing at **2,500+ images per run**. Track record of measurable impact — **80%+ crash reduction, ~97% faster planogram creation, 50% less promotional-spend leakage** — plus 6+ years mentoring developers and interns while leading technical execution on globally deployed products.

SKILLS

Languages & Frameworks : JavaScript, Python, HTML, CSS, React, React Native, Vue.js, Next.js, Angular, Redux, Redux Saga, TypeScript, NestJS
Libraries & Visualization : D3.js, Recharts, Chart.js, ECharts, React Konva, Ant Design, Material UI, Pandas, NumPy, Axio, BlueImp
Platforms & Tools: AWS, GCP, MS SQL Server, Git, Postman, Webpack, Babel, Gradle, Android Studio, Xcode, Linux, VSCode, Claude, Open AI
Engineering : Offline-first architecture, async upload queues, deep linking, REST APIs, WebSockets, client-side caching, AI/computer-vision integration, performance optimization

EDUCATION

Lambton College in Toronto, Canada - PG Certification in Artificial Intelligence and Machine Learning **Sep 2023**
GGSIP University, India - Bachelor of Technology in Electronics and Communication Engineering **June 2018**

EXPERIENCE

ParallelDots Technology; Remote, Canada/India; Senior Software Developer - III **Oct 2025 - Present**

- Architected and developed an offline-first React Native application experience for ShelfWatch, enabling seamless check-in/out, image capture and data synchronization over intermittent network connectivity for 25,000+ users across 17+ global clients.
- Built an asynchronous image-upload queue handling 2,500+ images per batch (40–60 per session), enabling users to keep working while uploads and analysis run in the background with real-time status tracking.
- Drove an 80%+ reduction in production crashes by instrumenting Bugfender analytics to triage severity and prioritize stability fixes.
- Integrated an on-device computer-vision model for image analysis, eliminating 100% of prior analysis API calls and cutting processing latency by 30+ seconds per cycle.
- Implemented deep linking across 10+ React Native features to orchestrate sequential task workflows, while leading and mentoring 6 developers with 2 interns and driving technical execution for a globally deployed product.

ParallelDots Technology; Remote, Canada/India; Senior Software Developer - II **Oct 2023 - Sep 2025**

- Structured and coded a full-stack support platform (Vue.js, Python) used by 350+ employees across 9 teams and 5 departments for ticketing, authorization, workflow escalation, and developer-bandwidth tracking.
- Conceived and created a React Konva-based planogram builder with computer-vision integration, serving 10+ clients across 500+ stores; reduced planogram creation time by ~97% and product-misplacement/out-of-stock issues by 80%+.
- Led frontend development for a trade-promotion validation platform serving 5+ clients and 300+ stores, reducing promotional-spend leakage by 50% and validation turnaround to ~1 day.
- Collaborated across teams to ensure frontend/backend integration across 4 major projects, contributing to 65% faster deployment cycles.
- Resolved 75+ production and cross-browser issues, driving an 82% drop in error rates and a 45% improvement in system stability.

Rogers Communication; Toronto, Canada; Software Developer Co-op Intern **May 2023 - Sep 2023**

- Reduced production API failures by 60% through strategic testing of Python/Flask RESTful APIs on mock servers resulting in quantifying the impact of testing strategies.
- Partnered with the backend team on API integration and server-side operations for lazy-loading UI components, reducing page load time by 20%.
- Optimized Python/Selenium Robot based automation suites to achieve a 90% issue resolution rate, showcasing expertise in streamlining operations and reducing downtime by 15%.

ParallelDots Technology; Gurugram, India; Software Developer **Oct 2018 - Jan 2022**

- Integrated NLP models into the Komprehend AI application (Vanilla JS), supporting multilingual text-intelligence APIs for 10M+ texts and 12K+ developer clients.
- Led development as team lead for ShelfWatch 2.0, a ReactJS tagging tool empowering data taggers to annotate 500K+ images across 31+ product categories at 98% accuracy.
- Executed UI designs seamlessly with back-end services (REST APIs & WebSocket), fostering continuous connectivity with front-end to ease flow of data, leading to a 40% enhancement in overall application performance.
- Implemented testing frameworks (Zest & Enzyme) & A/B testing with user feedback analysis, leading to a 20% decrease in delays caused by bugs & 40% improvement in the overall quality of the code.
- Redesigned the React.js frontend architecture with Redux-based client-side caching, boosting application with a notable reduction in media loading and processing improving runtime by 25%.
- Spearheaded creation of lite version of extensive brand application using Python Flask, facilitating CRUD operations on lightweight UI constructed empowering users with low configuration systems to seamlessly access the application
- Launched and ran internal 'KeepUpWithTech' sessions on Vue.js and Next.js, mentoring 10+ junior developers and interns through ongoing code reviews.
- Contributed performance improvements that supported a 54% expansion in deals closed — part of the effort that won the Tech4Future Challenge (SoftBank) and helped secure $4.5M in Series A funding from Btomorrow Ventures.

PROJECTS

Fitofy - Platform to Train Track Transform **June 2026 - Present**

- Independently created Fitofy, a responsive fitness-tracking platform integrating workout logging, nutrition/protein tracking, body measurements, progress analytics, goals, and weekly reviews across 20+ screens, using reusable UI components and responsive design patterns to deliver a consistent experience across desktop, tablet, and mobile.
- Engineered an end-to-end fitness data workflow covering workouts, nutrition, body composition, progress photos, PRs, and analytics, with offline-first logging, real-time visualization, automated insights, and reusable components for scalable personalized tracking and recommendations.
- **Tech Stack :** ReactJS, Python, Redux Saga, Antd, Tailwind CSS, TanStack Table, Formik, MongoDB, NodeJs, Zustand

WealthWay - Your Financial Companion **May 2025**

- Programmed and developed WealthWay, an investment portfolio analytics react native application supporting 8+ asset classes and 10K+ sample of historical valuation records, enabling users to track portfolio performance, allocation, returns, goals, and investment trends through interactive dashboards, reducing manual portfolio analysis effort by ~60% versus the prior Excel-based process.
- Architected a scalable MongoDB domain model for 10+ core entities, engineering targeted indexes and aggregation pipelines that reduced portfolio query response times to sub-second levels across desktop and mobile platforms.
- **Tech Stack :** React Native, TypeScript, Redux Toolkit, Material UI, Tailwind CSS, TanStack Table, OpenAI API, Formik, MongoDB, NodeJs, NestJS.

Crypto Exchange Book Trading Platform **Apr 2022**

- Crafted a sophisticated platform facilitating exchange of commodities (gold, cryptocurrencies, assets, and bonds), seamlessly integrating transactional data into an interactive dashboard tracking 100+ records of parties engaged in trade.
- Engineered highly secure application featuring custom multi-factor authentication, integrated with a multi-currency payment gateway, designed using MaterialUI & developed using ReactJS & Python, ensuring an optimal user experience.
- **Tech Stack :** ReactJS, Python Django, Redux Saga, Antd, Tailwind CSS, TanStack Table, Formik, MongoDB, Binance API

Hedge Fund Prediction - Query Builder **July 2023**

- Integrated 100+ financial metrics from multiple third-party APIs, using an AI prediction model to validate calculations, enabling tailored strategic financial decision-making for a hedge fund aligned with the client's monetary interests.
- Envisioned as a promising asset management solution, the application seamlessly integrates ReactJS, Node.js, refined Material UI-based UI, React Tables for tabular data, ReCharts for visualizing charts, supported by PostgreSQL database.
- **Tech Stack :** ReactJS, Python Flask, Material UI, Select, ReCharts, Redux, PostgreSQL
